

# PRO OPTIX CPE / FTTH-BOX

Purpose designed for simplicity, robustness, discreetness and cost-effectiveness

The Pro Optix CPE / FTTH-Box gives FTTH installers a simple, robust and flexible solution for splicing and termination of fiber to the home or business. The box design is slimline and discreet and is simply mounted directly on the wall beside the incoming fiber, it is also intelligently designed to be price effective. The CPE / FTTH-Box from Pro Optix is provided with a 3-year warranty for your peace of mind.

- ✓ Can be **fully provisioned** for delivery

**CASING SPECIFICATIONS**

- ✓ Slimline robust design for discreet placement and quick installation.
- ✓ Steel casing with aluminium insert. Cooling vents provided.
- ✓ Simple but robust and removable

**INSTALLING THE CPE / FTTH-BOX**

The installer assembles the box onto the wall with screws in the “keyhole” and connects incoming fiber to the CPE / FTTH-box media converter. The CPE / FTTH-box includes media converters, SFP transceivers and patch cables. Most media converters are compatible with Pro Optix’s CPE / FTTH-box.

**CONNECT TO PRO OPTIX CPE / FTTH-BOX**

Connecting to the box is simple; on the side of the box is an RJ45 socket, so that the customer can easily connect to the existing router or switch. This provides a simpler installation as you do not need to place the router/switch/WiFi equipment where the fiber outlet is placed. It also provides the customer with the opportunity to choose an optimal location for their WiFi equipment.

Included in the Pro Optix fiber to the home CPE / FTTH-box bundle
